EXPERIENCE

Yandex — *Software Engineer*

JUNE 2021 - PRESENT

- Worked on Yandex.Product project, communicated closely with PMs to prioritize features to deliver a project on time for the beta launch.
- Joined the project and quickly onboarded myself to meet a challenging deadline.
- Successfully delivered the project, which increased the count of e-commerce requests on the Search by 5%.

Technologies: Java, Kotlin, Spring Boot, Hibernate, PostgreSQL, OracleDB, Yandex Table (in-house Hadoop-like solution), Monorepo, LogBroker (in-house Kafka-like solution).

Skillaz — *Backend Developer*

AUGUST 2020 - JUNE 2021

- Assumed responsibilities of Team Leader in his absence: daily meetings, planning, and backlog grooming, estimation of tasks for a sprint, answered urgent requests from managers/support/clients.
- Implemented a detailed history of versions of the client configuration. This made it possible to catch the breaking configuration changes by the technical support, which reduced the burden on developers.
- Implemented more flexible access policies of the client configuration. A flexible UI solution reduced the percentage of tasks coming to the developers to configure accesses from code.

Technologies: Java, Kotlin, Spring Boot, MongoDB, ELK.

TOP CASE — *Full-Stack Developer*

DECEMBER 2019 - AUGUST 2020

- Got up to speed with my frontend skills in 2 weeks, allowing me to solve not only backend tasks.
- Accomplished a massive refactoring in several iterations. It reduced the codebase and the number and complexity of queries. As a result, the speed of opening the product's model description page increased by 30%.

Technologies: Java, Spring Boot, JavaScript/TypeScript, React, MobX, MS SQL.

Mobile TeleSystems — *Backend Developer*

SEPTEMBER 2018 - NOVEMBER 2019

- Discussed directly with architects to better understand tasks.
- Refactored legacy, rewrote WCF services to ASF (Azure Service Fabric).
- Passed training courses on EQ, Agile, and Microservices.

Technologies: Java, Spring, JavaScript/JQuery/XSLT, PDL (in-house Camunda-like solution)

SKILLS

Strong experience:

Kotlin, Java, Spring Boot

Average experience:

Hibernate, JavaScript, TypeScript, React, SQL, NoSQL (MongoDB)

Small experience:

Python, GitHub Actions

LANGUAGES

English
Full Professional Proficiency

Deutsch
Elementary Proficiency

Russian
Native

EDUCATION

Dagestan State University
SEP 2014 – AUG 2018

Fundamental informatics and information technologies
Bachelor's degree

PROJECT

CommunityBot (clickable)
a Telegram bot that was created to combine all announcements of a community with multiple chats in a single channel.

Technologies:
C#, ASP.Net Core, Github Actions

INTERESTS

Swimming, Dancing, Investment
